Meredith Victoria

To: Wildfire Safety Bunkers Pty Ltd

Dear Anthony

Having lived in a very fire prone area of Victoria since 1983, it was a great relief last year to discover Wildfire Safety Bunkers.

Despite having installed a 40,000 litre fire fighting water tank and petrol pump to supply sprinklers surrounding the hut and along the roof; plus ember proof gutter guards; plus concreting of any gaps between the metal walls and the ground; I was not confident to shelter in the hut in the event of fire.

I was therefore constructing an underground bunker near the water tank and pump, but was not happy with my progress in this venture.

As soon as I heard of Wildfire Safety Bunkers I phoned Anthony Tratt to put in an order. He visited the property to check access, the best site for the bunker as to comply with all regulations and to explain the safety features of the bunker.

I decided to go ahead ASAP well before the fire danger period, and was lucky that there was a bunker available at the factory which could be installed almost immediately.

Despite the difficult access to my property preventing large trucks from bringing in the bunker and excavation equipment, alternative transport was arranged (a crane) and the delivery and installation of the bunker was an exciting and seamless operation, with a wonderful team of experts working together so that the whole process was completed in half a day.

I am absolutely delighted with the bunker and its presence gives me great piece of mind for the future.

I thank Anthony and all the team and highly recommend Wildfire Safety Bunkers.
